

The [Nanoscience Cooperative Research Center](#), CIC nanoGUNE, located in Donostia-San Sebastian, Basque Country (Spain), is currently looking for a

POSTDOCTORAL RESEARCHER

to work on

Spin-orbit based devices

NanoGUNE is a research center devoted to conducting world-class nanoscience research for a competitive growth of the Basque Country. NanoGUNE is a member of the Basque Research and Technology Alliance (BRTA) and is recognized by the Spanish Research Agency as a *María de Maeztu* Unit of Excellence.

The [Nanodevices group](#), co-led by [Prof. Luis E. Hueso](#) and [Prof. Fèlix Casanova](#), is currently composed of 27 members including senior and junior researchers. The group counts with extensive research facilities for fabrication and characterization of devices and several active research lines spanning from nanofabrication to 2D electronics and spintronics. More information can be found [here](#).

The candidate will work on an international **collaborative project** entitled "FEINMAN 2.0: Super Energy Efficient Devices enabled by Quantum Materials". This project is funded by **Intel Corp.**, the world leading microprocessor company. The research topic encompasses the interconversion between spin currents and charge currents (spin Hall effect, Edelstein effect) in novel materials such as Dirac semimetals. The project also foresees the integration of working spin-to-charge

nanodevices with tunnel barriers and with magnetoelectric substrates. The final goal is to help implement the magnetoelectric spin-orbit (MESO) logic technology proposed by Intel [S. Manipatruni et al., Nature **565**, 35 (2019)].

The research will require advanced nanofabrication of devices (thin film deposition, electron-beam lithography, etching), together with their magnetotransport measurements (including harmonic Hall measurements).

Candidates must have a

- Ph.D. in Physics or a similar field
- Proficiency in spoken and written English.

Although not compulsory, the following points will be considered:

- Experience in any of these experimental techniques: e-beam lithography, materials growth and characterization, etching, electrical transport measurements (including harmonic Hall measurements).
- Previous knowledge in spintronics, spin-orbit torques, magnetic tunnel junctions
- Strong track record in publications at the highest level.
- Self-motivated and a team player willing to coordinate the research in a particular topic.

We offer an international and competitive environment, state-of-the-art equipment, and the possibility to perform research at the highest level.

We promote teamwork in a diverse and inclusive environment and welcome all kinds of applicants regardless of age, disability, gender, nationality, race, religion, or sexual orientation.

The position is expected to start on 15/02/2022 and go on for up to 3 years in the [Nanodevices group](#).

Candidates should **apply** by completing the form below, attaching the following documents:

- a) Complete CV, including two references
- b) Cover letter

The **deadline** for applications is **November 5, 2022**.

NOTES:

** All applications will receive an answer after the end of the selection process; but please note that due to the large number of submissions that are expected, we cannot provide individual feedback.*

** Additional information about nanoGUNE's commitment towards [HR excellence in Research and Gender Equality](#) are available on our website.*
